PT-011 — WashPro Installation Guide Rev.4

Document ID: PT-011

Revision: 4

Authority Class: MANUFACTURER_TECHNICAL

Status: Current

Scope

Applies to canonical WashPro models UW-320, UW-380, UW-450, HT-600, HT-800, GW-280, GW-330, and GW-400 where the model-specific documentation does not state a more-specific requirement.

Water Supply

Supply-water temperature: 5–60°C. Dynamic water pressure: 0.20–0.40 MPa.

Baseline Clearances

Rear clearance: 100 mm. Side clearance: 75 mm. Top clearance: 100 mm for undercounter and glasswasher configurations; 300 mm above the hood in the closed position for hood-type configurations.

Installation Validation

Confirm model identity, site utilities, access, drainage, and applicable model-specific conditions before installation. Product availability does not establish site readiness or installation scheduling.

Precedence

A current applicable bulletin or model-specific technical notice overrides only the claim within its stated scope. More recent evidence does not automatically override unrelated requirements.
