TECHNICAL BULLETIN

BrewCore BC-920 Water Connection Update

Field	Value	Field	Value
Document ID	TB-003	Revision	1
Effective Date	20 June 2026	Status	Current
Document Type	Technical Bulletin	Authority Class	Manufacturer Technical
Product Family	BrewCore BC Series	Supersedes	None

1. Purpose

Defines an updated machine-side water-inlet connection for a specific BC-920 production population. General operating pressure and other PT-004 requirements remain unchanged.

2. Production Population

BC-920 Population	Machine-Side Water Inlet
Serial before BC920-26-06001	1/2 inch
Serial BC920-26-06001 and later	3/4 inch

3. Pressure Requirement

BC-920 operating water pressure remains 0.15-0.60 MPa. Larger connection size does not mean higher acceptable pressure, and correct connection size does not prove adequate flow or pressure.

4. AquaPure Compatibility

Treatment compatibility remains governed by CP-001. WF-250 + BC-920 is CONDITIONAL with CK-25. WF-300 + BC-920 is CONDITIONAL with ADP-WF38-12 and must also account for the actual BC-920 production configuration.

5. Unknown Serial Number

If the exact serial number is unavailable, machine-side connection requirement is UNKNOWN. Do not assume the PT-004 baseline or the later 3/4-inch configuration applies to every unit.

6. Legacy Upgrade Logic

• Identify exact BC-920 serial number.

• Determine whether 1/2-inch or 3/4-inch machine-side inlet applies.

• Retrieve CP-001 for treatment compatibility.

• Retrieve CP-004 for legacy reuse requirements.

• Verify approved transition components, service flow, and dynamic pressure.

• Do not create unsupported generic multi-adapter chains.

7. Scope of Override

TB-003 overrides PT-004 only for BC-920 machine-side water-inlet connection size in the affected production population. It does not override pressure, drainage, electrical, clearance, product capability, warranty, or commercial policy.
