POLARIX ICE SYSTEM COMPONENT COMPATIBILITY GUIDE

Approved Modular Ice-System and Interface Relationships

Field	Value	Field	Value
Document ID	CP-003	Revision	3
Effective Date	1 January 2026	Status	Current
Document Type	Compatibility Guide	Authority Class	Manufacturer Technical
Product Family	Polarix IC Series	Supersedes	None

1. Purpose and Scope

Defines approved relationships among modular Polarix ice-maker heads, canonical Northstar storage-bin products, and the AK-12 legacy water-interface adapter. Physical fit does not establish approved compatibility.

2. Covered Components

Component	Type	Role
IC-420	Modular ice-maker head	240 kg/day nominal production
IC-500	Modular ice-maker head	350 kg/day nominal production
IC-650	Modular ice-maker head	500 kg/day nominal production
BN-420	Storage bin	Approved modular storage platform
BN-650	Storage bin	High-capacity modular storage platform
AK-12	Water-interface adapter	Legacy WF-300 to IC-420 machine-side interface

3. Ice-Maker to Storage-Bin Matrix

Ice Maker	BN-420	BN-650
IC-420	DIRECT	NOT SUPPORTED
IC-500	NOT SUPPORTED	DIRECT
IC-650	NOT SUPPORTED	DIRECT

4. AK-12 Interface Rule

AK-12 is a Polarix legacy water-interface adapter kit, not a storage-bin top kit.

Approved machine-side use in this corpus is limited to IC-420 where CP-001 identifies WF-300 + IC-420 as CONDITIONAL - AK-12. AK-12 does not establish water-treatment capacity, flow, pressure, or site suitability.

5. Physical Fit vs Approved Compatibility

A head may appear to fit a bin or interface physically without being an approved combination. Do not infer compatibility from width, mounting surface, connector similarity, or successful placement.

6. Production vs Storage

Nominal ice production and storage capacity are separate characteristics. A compatible storage bin does not increase production rate, and a larger bin is not automatically the better recommendation.

7. Existing Component Reuse

• Identify exact bin or adapter SKU.

• Verify physical condition and completeness.

• Retrieve the explicit compatibility relationship.

• Verify site dimensions and service access separately.

• Do not invent or substitute field-fabricated adapters.

8. Multiple Compatibility Layers

• Product suitability - can the ice maker meet demand?

• Component compatibility - is the bin approved?

• Water-treatment compatibility - does CP-001 approve the treatment relationship?

• Installation feasibility - can the complete system meet site requirements?
