POLARIX IC SERIES

Commercial Ice Systems - Product Catalog

Field	Value	Field	Value
Document ID	PT-001	Revision	3
Effective Date	1 January 2026	Status	Current
Document Type	Product Catalog	Product Family	Polarix IC Series

1. IC Series Overview

The Polarix IC Series is a range of commercial ice-making systems for foodservice, hospitality, beverage, catering, and institutional applications. Model selection should consider daily and peak demand, operating environment, storage, footprint, utilities, and expected growth.

• IC-280 and IC-380 are self-contained systems.

• IC-420, IC-500 and IC-650 are modular systems requiring a compatible storage bin.

2. Model Selection

Model	Nominal Production	Configuration	Rated Power	Dimensions (W x D x H)
IC-280	100 kg/day	Self-contained	0.65 kW	600 x 620 x 980 mm
IC-380	160 kg/day	Self-contained	0.85 kW	700 x 670 x 1,080 mm
IC-420	240 kg/day	Modular	1.30 kW	560 x 700 x 880 mm*
IC-500	350 kg/day	Modular	1.75 kW	700 x 720 x 900 mm*
IC-650	500 kg/day	Modular	2.40 kW	760 x 780 x 980 mm*

* Modular dimensions refer to the ice-making head only. Nominal production is a reference rating under defined test conditions; actual output can vary with ambient temperature, inlet-water temperature, ventilation, water quality, installation, and operating pattern.

3. Model Positioning

• IC-280: compact commercial system for moderate and predictable ice demand.

• IC-380: medium-capacity self-contained system for higher daily output.

• IC-420: modular high-volume system for hotels, restaurants, catering, and beverage-intensive sites.

• IC-500: higher-capacity modular system for substantial daily and peak demand.

• IC-650: large-capacity modular system for demanding commercial environments.

4. Operating Environment

Requirement	Range
Ambient temperature	5-40 degrees C
Inlet-water temperature	5-35 degrees C
Water	Potable
Environment	Indoor commercial use

Operation near environmental limits may reduce production performance. Detailed water pressure, drainage, clearance, utility preparation, and commissioning requirements are defined in PT-002.

5. Selection Considerations

• Daily demand and peak demand

• Operating environment

• Storage requirement for modular models

• Available footprint

• Site utilities

• Reasonable operational growth

Nominal daily production should not be used as the sole selection criterion.

6. Selection Limitations

Product selection does not by itself confirm installation feasibility, compatibility, inventory availability, pricing, discount eligibility, warranty entitlement, or customer-specific commercial terms. Review applicable installation documentation and technical bulletins before final commitment.

7. Related Documentation

• PT-002 - Polarix IC Series Installation Guide

• CP-001 - AquaPure Equipment Compatibility Matrix

• CP-003 - Polarix Ice System Component Compatibility Guide

• Applicable Polarix Technical Bulletins

Specifications and requirements are subject to controlled technical revision. Always verify the current applicable documentation before a final customer-facing or installation commitment.
